Work Experience

Openlane - Lead Software Engineer

May 2026 - Present

- Lead design and development on backend services that track a vehicles status within an auction lot
- Modified an iOS app to interact with a new backend service
- Built and maintained support tools written in Go and Typescript
- **Key Tech** - C#, Pulsar, Kubernetes, Go, Typescript, Pulsar

Openlane - Senior Software Engineer

November 2023 - May 2026

- Designed and built services and APIs in C# /.NET to facilitate dynamic automobile inspections
- Managed terraform and kubernetes configuration for AWS deployments
- Assisted in developing the web ui using React and TypeScript
- **Key Tech** - C#, AWS, Kubernetes, PostgreSQL, .NET, React, TypeScript

Amazon - Software Engineer

June 2022 - November 2023

- Built a service to store SSL certificates to enable customers to inspect TLS traffic.
- Designed a new service that provides functionality to check the revocation status of SSL certificates.
- Implemented improvements to increase efficiency of the billing service by refactoring DynamoDB tables to handle large data sets. This reduced ops tickets by 15 per month.
- Fixed critical bugs in the infrastructure deployment logic to decrease deployment time by up to 2 weeks.
- **Key Tech** - Java, Python, AWS, DynamoDB

Omnicell - Software Engineer 3

November 2020 - June 2022

- Worked on transitioning a legacy code base to a cloud based, microservice architecture using Azure, Kubernetes, and .NET which enabled increased scalability.
- Built front end web applications using Angular, Nx and Typescript, targeting multiple screen sizes and utilizing server side rendering to decrease load times by 50%.
- Developed common, shareable packages for cross team use to help decrease development time on common tasks.
- **Key Tech** - C#, Typescript, Javascript, Angular, .NET, RabbitMQ

Kroll - Senior Software Engineer

September 2017 - November 2020

- Led migration of applications from on prem to AWS, utilizing ec2.
- Developed a message based system using RabbitMQ to sync data in near real time between a custom application and Salesforce. Data would sync within 5 minutes.
- **Key Tech** - C#, Javascript, Typescript, Angular, VueJS, AWS, .NET, RabbitMQ

Computer Aid - Software Developer

May 2014 - September 2017

- Led mentorship program which consisted of training junior developers and interns using a 4-6 week project based curriculum.
- Implemented a CI and CD pipeline using Azure DevOps to reduce deployment times from 2-4 hours to 5 minutes.
- **Key Tech** - C#, .NET, Javascript, Angular

Education

Messiah College

Bachelor of Science, Computer and Information Science

Mechanicsburg, PA

August 2010 — May 2014
